EARTH [Eopð, Sax. Terre, Fr. Terra, Lat. Γῆ, Gr. γῆ, Heb.] the opinion of the ancients concerning the figure of the earth, was very different from what is now believed; some held it to be a large hollow vessel; others that it was an immense plain, supported with pillars like a table. And these opinions were so stiffly maintain'd by some of the fathers (particularly *Lactantius* and *Augustin*) and so firmly believed, even for more than 600 years after Christ, that pope *Gregory* excommunicated and deposed *Vigilius*, bishop of *Strasburg*, for asserting the *Antipodes*. And many of the philosophers believ'd it to be a cone or high mountain, by which they accounted for the disappearance of the sun at night. But the moderns have discovered the body of the earth and water to be a globe, which may be prov'd by these plain and undeniable arguments.

1. It plainly appears that the earth is globular from the eclipses of the moon; for the shadow of the earth being always round; the earth that is the body that intercepts the beams of the sun, and is the undisputed cause of such eclipse, must of necessity be of a round form.

2. The nearer any person approaches to either of the poles, the stars nearest to the pole are the more elevated from the horizon towards the zenith; and on the contrary, the farther a person moves from the poles, the same stars seem to withdraw from him till they quite disappear. Again, they rise and set sooner to one that travels to the *East*, than they do to one that travels to the *West*; insomuch that if a person should spend a whole year in going round the earth to the *East*, he would gain a day; whereas on the contrary in journeying the same westward, he would lose a day. And this is actually seen between the *Portuguese* in *Macao* an island of the south of *China*, and the *Spaniards* in the *Philippine* islands; the Sunday of the *Portuguese* being the Saturday of the *Spaniards*; occasioned by the one's sailing thither eastward, and the other westward; for the *Portuguese* sailing from *Europe* to the *East-Indies*, and thence to *Macao*; and the *Spaniards* passing westward from *Europe* to *America*, and thence to the *Philippine* islands, between them both, they have travelled round the earth.

3. That the world is round, is demonstrated by the voyages that have been made quite round it; for if a ship setting out from *England* and sailing continually westward, shall at last come to the *East-Indies*, and so home to *England* again, it is a plain demonstration it is a globe and not a flat, a cube, a cone, or any other form. And these navigations have of late years been frequently made, which puts the matter out of all doubt.

EA'RTHQUAKE [of Eopð earth, and cƿacian, Sax. to quake] a violent shock or concussion of the earth, or some parts of it, caused by fire or hot vapours pent up in the bowels or hollow parts of it, which force a passage, and frequently produce dreadful effects, as the destruction of whole cities, the swallowing up, or overturning mountains, &c.

Naturalists, some of them, ascribe *Earthquakes* to water, others to fire, and all of them with some reason. Nay,

1. The earth itself may be the cause of its own shaking, when the roots or basis of some large mass being dissolved or worn away by a fluid underneath, it sinks into the same, and by its weight causes a tremour, produces a noise, and frequently an inundation of water.

2. The subterraneous waters may occasion earthquakes by their cutting out new courses, &c. or the water being heated or rarify'd by the subterraneous fires, may emit fumes, blasts, &c. and may cause great concussions.

3. The air may be the cause of earthquakes; for the air being a collection of fumes and vapours raised from the earth and water, if it be pent up in too narrow viscera of the earth, either the subterraneous heat, or its own native one rarifying and expanding it, the force wherewith it endeavours to escape, may cause a shaking of the earth.

4. Fire is a principal cause of earthquakes; both as it produces the subterraneous air or vapours before-mentioned; and as this *aura*, air or spirit, from the different matter and composition of which, sulphur, bitumen, and other inflammable matters do arise, takes fire, by either some other fire it meets withal, or from its collision against hard bodies, or by its being intermixed with other fluids; by which means bursting out into a larger compass, the space becomes too narrow for it, and so pressing against it on all sides, it causes a shaking of the contiguous parts, till having made itself a passage, it spreads itself in a volcano.

There being much sulphur and bitumen, and such like combustible matter in many places of the bowels of the earth, it is no hard matter to imagine how it should kindle, which tho' it may be done several ways, I shall instance but in one. Since the earth contains such different matters in it, it may be easily imagined that there are caverns in some places, which are filled with no other matter but gross airs, and sulphureous or bituminous vapours, and it may so happen that a flint shall drop from the arch of the cavern to another flint below, and strike fire out of it, which shall either enflame the vapour, or the sulphureous and bituminous matter thereabouts, which when they have once taken fire, keep it in very long, and communicate it to other bodies of a like nature, and when these get vent, they burst out in very violent eruptions, as has been seen in *Ætna*, *Vesuvius*, and other places.

But when it so happens that in vast caverns the vapours and thicker matter take fire all at once, the air in such a motion cannot rarify and disperse, but it must give a sudden concussion to the upper part of the caverns, and make all the ground above it to tremble, and cause an earthquake; and the deeper the mine lies, and the larger the quantity of matter is, which takes fire at one time, the more violent and extensive is the earthquake.

But if the cavern happens to be near the surface of the earth, there are many times eruptions of fire that consume the bowels of it, so that the ground sinks in; and where the opening is wide enough, trees and houses are swallow'd up in it, as it happened in *Jamaica* in the year 1692.

And this is not bare conjecture, but is confirmed by experience, for the great eruptions of the famous burning mountains are always attended with an earthquake in the neighbourhood, as they in *Naples* and the places thereabouts, have experienced.

Others, as *Camden*, *Verflegan*, &c. derive it from *Angulus* an angle, corner or narrow neck of land, their ancient country near *Sleswick*. Mr. *Sammes* deduces it from *ANG* or *ENG*, which in the *Teut.* signifies a narrow or freight place, and hereupon concludes that the *Angeli* or *Angli* were so called, because they inhabited the freight passages in the mountainous parts of *Germany*, and to confirm it, alledges that *Angleven* in *Pomerania* was so named from the angles that are situated in such narrow passes. Others derive the name from *Ingo* or *Engo*, a son of *Woden*, the great progenitor of the *English* *Saxon* kings. The posterity of which *Ingo* were called *Inglingar* or *Inglingis*, who seems to have been made by his father king of that part of the *Suevi*, which afterwards from their first king called themselves *Inglish* or *Inglingis*; and it is certain, that the *Byzantine* historians, *Nicetas* and *Codinus*, call the *Angli* *Ἰγγλινοί*, i. e. *Inglini* or *Inglini*.

EPICK Poem, is a discourse invented with art, to form the manners of men by instruction, designed under the allegories of some important action, which is related in verse, after a probable, diverting and wonderful manner. *Bosca* thus defines it; and it agrees very well with our idea of an Epick poem. Tho' *Aristotle* says Epick poetry makes use of discourses in verse and prose, and *M. Dacier* agrees with him; but we in *England* have all our poetry in verse at least, if not in Rhime. And we rank discourses in prose, altho' there may be the texture of a fiction in them, among what we call fables, and allow nothing to be Epick poetry, but what is in verse. See *Heroick Poem*.

Epick poesy is not confined to observe unities of time and place. *Aristotle* says it has no settled time, and in that it differs from the Dramatick. And as to unity of place, that need not be observed, because the poem is read as an history, which may be left off by the reader at pleasure.

FIGURES [in *Rhetorick*] are not to be looked upon only as certain terms invented by *Rhetoricians* for the ornament of their discourse. God has not denied to the soul, what he has granted to the body; as the body knows how to repel injuries, so the soul can defend itself as well, and it is not by nature immoveable, when it is attack'd; all the figures which the soul makes use of in discourse, when it is moved, have the same effect as the postures of the body. Figures in discourse are as proper to defend the mind, as postures are to defend the body in corporeal attacks.

Theatrical FIGURES [among *Rhetoricians*] are such as bad orators affect when they measure their words, and give them a cadence to tickle their ears; tho' they figure their discourses, yet it is with such figures, which being compared to those that are strong and persuasive, are like the postures in a dance to those in a battle. The art and affectation that appears in a painted discourse, says a certain author, are not the character of a soul truly touch'd with the things it speaks of, but under no concern at all.

FIGURES of Discourse, are extraordinary ways of speaking very different from the common and natural.

FIGURES of Words [among *Rhetoricians*] are quite different from figures of discourse; for figures of discourse are produced chiefly by the agitations of the soul; figures of words are the effect of the calmness and study of the mind. A figure of words consists sometimes in the repetition of the same word, the same letter, and the same sound, which tho' it is often disagreeable, yet never shocks when the repetition is made with art. This repetition is made sometimes in the beginning of sentences, sometimes in the middle, and sometimes in the end of sentences.

FIRE [fyrne, Sax. πυρ, Gr.]

FIRE [with Naturalists] is by some defined to be a company of particles of the third element, moved with the most rapid motion imaginable; or a lucid and fluid body, consisting of earthy particles, most swiftly moved by the matter of the first element, upon which they swim, as it were.

Fire is not only propagated several ways, where there is none. 1. By collecting the sun's rays in a convex-glass, which will set fire to that point, on which the rays fall, provided it be a combustible matter, i. e. such as will burn. 2. By striking flints one against the other or against steel. 3. By rubbing wood or iron or any other solid body a great while together and very hard, at last it will take fire; also by winding cords about a stick and swiftly twitching them, this way and that way, will set them on fire. Some hard canes struck with a tobacco-pipe, will force out fire.

As to the effects of fire, they are various as the matter that feeds it. If fire be set to wood or looser materials, they begin to flame; but to excite a flame, both the fire and combustible matter must have the advantage of a reasonable free air, or else the fire is choaked and goes out. And tho' a place is not wholly without air, yet if that air have no communication with the open air, so as to go backward and forward thro' some passage, the materials set on fire will go out; whereas fire in an open place will continue to burn till all the fuel is spent. A lighted candle quickly goes out in a glass so well stoppt that no air can come into it.

Ancient FORTIFICATION, was walls of defence made of trunks of trees, &c. mix'd with earth to secure them against the assaults of an enemy. These in time were alter'd for walls of stone, with little walls or parapets raised on the top of the other, behind which they made use of their darts in security, the parapets being cut into loopholes, and these walls are flanked by round or square towers.

She was represented in a chariot dragged by four blind horses; under her feet was a globe, and in her right hand she held the helm of a ship, and in the left a *cornucopia* or horn of plenty. She had many images, statues and temples erected to her, and the *Romans* adored no deity more than *Fortuna*. FOUNTAINS [*fontes*, L. *fontaines*, F.] are of 2 sorts, such as dry up in the winter, and such as flow always. Most are of opinion, that the former are produced by the rain. Those perpetual springs may be defin'd to be collections of waters running down from the higher to the lower parts of the earth. Out of a great number of such fountains, rivers are gathered which carry the waters into the sea.

Some have imagined, that the perpetual ones are derived from the sea, and that there are subterraneous tubes in the earth, through which the sea-water is conveyed to the fountains. But this opinion is liable to these two difficulties, how it is possible for the sea-water to be carried to the tops of the highest mountains, since by all experiments in *Hydrostatics* it appears, that the surface of any water contained in any vessel always lies even, so that it is impossible for any one part of the surface to be higher than another; except it be made so by some external force.

2. How it comes to pass that fountain-water is not salt.

Others again dislike this hypothesis, and that for several reasons, and assign rain as the cause of fountains; but if rain were the only cause, whence can it be, that those fountains are never dry in the time of the greatest drought, when there has been no rain for a long time? and therefore others to rain add vapours; which being by the heat of the sun exhaled in vast quantities (as the learned Mr. *Edmund Halley* has proved) and they being carried over the low-land by the wind to the ridges of mountains, where they presently precipitate, and gliding down by the crannies of stone, and part of the vapour entering into the caverns of the hills, the water thereof gathers as in an alembick in the basons of stone it finds; which being once filled, all the overplus of water runs over by the lowest place, and breaking out by the sides of the hills, forms single springs, and many of these running down the valleys between the ridges of the hills, and coming to unite, form little rivulets or brooks; and many of these meeting again in one common valley, and gaining the plain ground, being grown less rapid, become a river; and many of these being united in one common channel, make the largest rivers, as the *Thames*, the *Rhine*, the *Danube*, &c.

GARTER, the most Noble Order of the Garter was in-

 say, on Account of his many signal Victories, particularly
 one, wherein it is said the King's Garter was used for the
 Token. But others say on the following Account, that the
 King dancing one Night with his Queen and other Ladies,
 took up a Garter which one of them had dropt; whereat
 some of the Lord's Present smiling, the King said, that he
 would make that Garter of high Reputation; and soon after
 erected the Order of the *Blue Garter*, with this Motto, *Honi
 soit qui mal y pense*, i. e. *Evil to him that Evil thinks*. The
 latter of these Motives is most generally believed to have been
 the Ground of the Institution of this Order of Knighthood.
 However, both these Motives might concur to the same End;
 and it has ever since been esteemed a great Addition of Ho-
 nour bestow'd on the noblest Person of the *English* Nation,
 and many foreign Princes have thought themselves honoured
 in being admitted into it. The Number of the Knights is 26,
 including the King, and that is one Thing that enhances the
 Value of it, that never any more are admitted, whereas all
 or most other Orders have been so freely bestow'd, that they
 have lost much of their Esteem by it. The famous Warrior
St. George of *Cappadocia*, is made the Patron of this Order;
 and every Knight of it is to wear as his Badge, the Image of
St. George on Horse-back, trampling on a Dragon, with his
 Spear ready to pierce him, the whole garnished with precious
 Stones appendant to a blue Ribbon about their Necks; be-
 cause that Saint is said to have slain such a Monster, that in
 his Days ravaged the Country.

They are also obliged to wear a Garter on the left Leg,
 set with Pearls and precious Stones, having this Motto, *Honi
 soit qui mal y pense*, i. e. *Shame to him that Evil thinks*;
 without which two Ornaments they are never to appear A-
 broad; and also King *Charles* the Ist ordained, that every
 Knight should always wear a Star of Silver, embroidered on
 his Cloak or Coat, with the *Escutcheon* of *St. George* within
 the Garter, in the Centre of it. See *St. George*.

GENII [of *gignendo* or *generando*, begetting, *i. e.* suggesting unto us Thoughts] the *Heathens* imagined that every Person was Born with two *Genii*, proper to him or her; these were also named *Dæmones*; the one was good and favourable, and persuaded to Honesty and Virtue, and in Recompence of it procured to him all manner of good Things proper to his Estate; and the other was the *Evil Genius*, who was the Cause of all Wickedness and Mishap. That these *Genii* were born and dy'd with them; that they were of a middle Nature between Gods and Men; that they partook of Immortality from the one, and Passions from the other; and having Bodies

fram'd of an aerial Matter, inhabited the vast Region of the Air, and acted as Mediators between God and Men, and were the Interpreters and Agents of the Gods, communicated the Wills of the Gods to Men, and carried the Prayers and Vows of Men to them; they believed that the good *Genii* rejoic'd at the good, and were afflicted at the ill Fortune of their Wards; that the evil *Genii* took a pleasure in persecuting Men and bringing them evil Tidings, which last were called *Larvæ* and *Lemures*. That they very rarely appear'd to Men, and wherever the former did it was in favour of some extraordinary Virtue, &c.

And they also imagined, that Kingdoms, Cities and Places had their peculiar *Genius's*. The *Genius* of the *Roman* State was painted with a *Cornucopia* in one Hand, and a Dish full in the other, which was stretched forth on an Altar. The *Heathens* thought the *Genii* to be of a middle Nature between God and Man, and therefore imagined them to be the Sons of *Jupiter* and *Terra*.

They reckoned also all the Stars into the Number of the *Genii*, and therefore worshipp'd them, as the *Jews* did, in the Quality of Angels. They painted them in a different manner; sometimes as a Serpent; sometimes as Boys and Girls, or as old Men, but always with a Garland of Palm-Tree on their Heads, whence this Tree was call'd *Arbor Genialis*.

In some antient Medals, the *Genius* of the Emperor of *Rome*, was painted as a Man with a large Dish of all sorts of Flowers in one Hand, and a Scourge in the other, to express both Rewards and Punishments.

They esteem'd it unlawful to kill any Creature to their *Genius* on their Birth-day, because they thought it undecent to take away Lives of Creatures on the same Day that they received their own.

The usual Offerings to the *Genii* were Wine and Flowers. As Men had their *Genii*, the Women had their *Junones*, Goddesses, that they imagined watch'd over and protect'd them.

Gentlemen have their beginning either from Blood, as before, as they are born of Parents of Worth; or for having done something in Peace or War, for which they are worthy to bear Arms, and be accounted Gentlemen.

Formerly such Gentlemen had many Privileges, as first, that if one Gentleman detracted from another, Combat was allow'd; but if a Peasant or mean Person did so, he had a Remedy in Law.

2. In Crimes of an equal Nature a Gentleman was punished more favourably than a Peasant, &c.

3. Gentlemen might expect a peculiar Honour and Respect to be paid them by mean Persons.

4. The Evidence of a Gentleman was accounted more authentick than that of a Peasant.

9. A Gentleman was not to accept a Challenge from a Peasant; because there was not a Parity in their Conditions.

The ancient *Saxons* admitted none to the Degree of Gentlemen that liv'd by Trades or buying or selling; except Merchants and those that follow'd Husbandry; which was always esteem'd a creditable Way of Livelihood, and preferable to trading to Sea.

The Reason why those that are Students in the Inns of Court are esteem'd Gentlemen is, because antiently none but the Sons of Gentlemen were admitted into them.

But the Students of Law, Grooms of his Majesty's Palace, Sons of Peasants made Priests or Canons; or those that have receiv'd Dignity in the Schools, or borne Offices in the City, tho' they are stiled Gentlemen, yet they have no Right to Coat Armour.

If a Man be a Gentleman by Office only, and loses that Office, then he also loses his Gentility.

In our Days all are accounted Gentlemen that have Money, and if he has no Coats of Arms, the King of Arms can sell him one.

GEOMETRY [*γεωμετρία* of *γῆ*, the Earth, and *μετρία*, Gr. to measure] Geometry originally signified the Art of Measuring the Earth, or any Distances or Dimensions on or within it; but it is now used for the Science of Quantity, Extension or Magnitude abstractedly considered, without any regard to Matter.

It is very probable, that it had its first Rise in *Egypt*, where the River *Nile*, every Year overflowing the Country, and leaving it covered with Mud, laid Men under a Necessity to distinguish their Lands one from another by the Consideration of their Figure; and to be able also to measure the Quantity of it, so that each Man after the fall of the Waters might have his Portion of Ground allotted and laid out to him. After which, it is very likely, a farther Contemplation of those Draughts and Figures help'd them to discover many excellent and wonderful Properties belonging to them, which Speculation continually was improving and still is to this Day.

Out of *Egypt* *Thales* brought it into *Greece*, and there it received its chiefest Perfection. For the Geometry of the Antients was contained within narrow Bounds, and extended only to right Lines and Curves of the first Kind or Order; whereas new Lines of infinite Orders are receiv'd into Geometry, which Orders are defined by Equations, involving the Ordinates and Abscisses of Curves.

The Subject of *Geometry* is the Length, Breadth and Height of all Things. It is divided into *Speculative* and *Practical*. The former treats of the Properties of *Lines* and *Figures*, such as *Euclid's Elements*, *Apollonius's Conicks*, &c. and the latter shews how to apply these Speculations to use in Life.

Geometry may also be divided into these three subordinate Parts. *Altimetry*, which is the Art of measuring strait Lines. *Planimetry*, or the Art of measuring of Surfaces. *Stereometry*, the Art of measuring Solids or Bodies.

Geometry is painted as a Lady with a fallow Face, clad in a green Mantle fringed with Silver, and holding a silver Wand in her right Hand.

GEOMETRY, is the Science or Doctrine of Extention or extended Things, *viz.* Lines, Surfaces and Solids, which discovers the magnitudes or greatness of Things precisely, with their Capacities, &c.

Theoretical GEOMETRY } is a Science which treats of
Speculative GEOMETRY } Magnitude or continued Quantity, with its Properties considered abstractedly, without any relation to material Beings; it contemplates the Property of Continuity, and demonstrates the truth of general Propositions, call'd *Theorems*.

Practical GEOMETRY, is the Method of applying *Speculative* to *Practice*; as the measuring of Land or solid Bodies, Navigation, Fortification, Dialling.

Elementary GEOMETRY, is that which is employ'd in the Consideration of right Lines, and plain Surfaces and Solids generated from them.

Sublimer GEOMETRY, is employ'd in the Consideration of curve Lines, conick Sections, and Bodies form'd from them.

GEOR'NICAL [*georgicus* of *γῆ* and *οἶκος*, Gr. Labour] of or pertaining to the Tilling or Manuring of Land.

GEORGE [of *Γεωργος*, Gr. an Husbandman] a proper Name of Men; the most noted of that Name was *George* of *Cappadocia*, a Tribune or Colonel under the Emperor *Dioclesian*, who is said to have kill'd a huge Serpent in *Africa*, to whom a Virgin was expos'd to be devoured. This Champion by some is taken for our *St. George*, the Patron Saint of *England*, of whose Chivalry and Exploits so many romantick Stories are told.

St. GEORGE, the Patron of *England*, some say, was a famous Warrior of *Cappadocia*, who after he had exercis'd his Valour in the Wars, laid down his Life for the Christian Faith, on which Account he was honoured of all the Christian World, and many Churches were erected in Honour of him, and he became at length to be the Patron Saint of *England*. This *St. George*, according to the Legend, did many brave Exploits in his Life-time, and after his Death is said to have appeared several Times in the Wars undertaken against the Infidels in the Holy Land, and to have fought on the Side of the Christians. And the Devotion of *Justinian*, introduc'd him into the Calendar; and that of *Robert de Oily*, built him a Church in the Castle at *Oxford*; and King *Edward III.* built him a Chapel at *Windsoer*. However, *Gelasius*, Bishop of *Rome*, condemn'd the Legend of *St. George* as heretical and ridiculous; and the Synod of *Ariminum* declared the Sufferings of *George* Apocryphal, in that it was set forth by Hereticks.

Neither the Time or Place of his Martyrdom are agreed on by Writers. Venerable *Bede* says, that the 9th of the *Calends* of *May* or 23d of *April* was the Birth Day of *George* the Martyr, who was eminent for Miracles, and suffered under *Dacianus*, a Potent King of *Persia*, that reigned over seventy Kings; but no such a Person as this *Dacianus* is to be found in History. But *Bede* adds, that his Sufferings are reckoned among the Apocryphal Writings.

As for the *Arian* Martyr, the Persecutor of *St. Athanasius*, and Usurper of the *Alexandrian* See, Pope *Zachary* built a Church for him, and plac'd the Head of *George* there, tho' the Body had been intirely burnt to Ashes 400 Years before. And it seems as if this eminent Martyr was not known in the World till 300 Years after his Death. *William* of *Malmfbury* makes the Place of his Martyrdom at *Rama*, if (as he says) we may give Credit to Fame; and *William* of *Tyre* says, he found a Resting-Place at *Lydda*, so that nothing of certainty is to be come at concerning this renowned Saint; and especially his Story of killing the Dragon, which some understand allegorically, to mean Fighting against the Dragon of Heresy, &c. And indeed this Allegory of Fighting with and killing the Dragon hath been taken up by other Nations, which had no particular Relation to any *George*, as the Order of the Dragon, instituted by the Emperor *Sigismund*, among the *Hungarians*, on Account of his Successes in Battles against the *Turks*, the Dragons of Schism and Heresy that devoured Religion. And since we cannot find our Patron *St. George*, I shall conclude the Enquiry with the following Lines:

*St. George to save a Maid the Dragon slew,
A pretty Tale, if all that's told be true?
Some say there are no Dragons, and 'tis said,
There was no George, I wish there was a Maid.*

GERYON [*Γέρων*, Gr. i. e. the Bawler,] as the Poets tell us, this Geryon was a monstrous Giant that had three Heads. But the truth of the Matter is, There was a City in the *Euxine Sea*, call'd, *Tricarenia*, [*Τρικαρηνία*, Gr. i. e. three Heads] where Geryon dwelt in great Reputation, and abounding in Wealth, and, among the rest, had an admirable Herd of Oxen: *Hercules* coming to drive them away slew Geryon who oppos'd him; and they that saw him drive away the Oxen admired at it, and to those that enquired concerning the Matter, they answered, that *Hercules* had driven away the Oxen of *Tricarenian Geryon*; from which some imagined that Geryon had three Heads: And this gave birth to the Fiction. *Palæphatus*.

The Parts being so closely connected, that it will not suffer any Diminution or Loss by Fire. It is not subject to Rust, and being heated or melted, preserves its Heat longer than any other Metal, and in Weight is ten times heavier than Earth, and there is seven times as much Matter in a Piece of Gold, as in one of Glass of the same Magnitude.

It is of so durable a Nature, that no Body can be extended so much as Gold, one Ounce of it being (as is reported) capable of being beat out into 750 Leaves, each four Fingers breadth square; nay, some affirm, that one Ounce of it may be beaten out so, as to cover ten Acres of Ground; and by Wire-drawers it is extended to that Length, that one Ounce will afford a Thread of 230400 Foot long.

The compound *Golden-Rule*, is when five Terms are propounded, in order to find out a sixth, as if four Horses eat eight Bushels of Corn in three Months, how much will serve eight for nine Months.

The *Golden-Rule direct*, is when the Sense or Tenour of the Question requires the fourth Number sought, to bear such proportion to the second, as the third Number has to the first: So in the first Question, as eight is the double of four, so ought the fourth Number to be the double of eighteen, *i. e.* thirty six.

The *Golden-Rule inverse*, is when the fourth Term required ought to proceed from the second Term, according to the same Rate or Proportion, that the first proceeds from the third; as for Example, if four Horses do require a certain Quantity of Corn six Days, how many Days will the same Quantity serve eight Horses: Here four is half eight, so ought the fourth Term required to be half six. HEAT, one of the four primary Qualities, which (according to the *new Philosophy*) consists very much in the rapidity of Motion, in the smaller Particles of Bodies, and that every way; or in the Parts being rapidly agitated all ways.

HEAT [in a hot Body] is the agitation of the Parts of that Body, and the Fire contained in it; by which agitation a Motion is produced in our Bodies, exciting the Idea of heat in our Minds; and heat in respect of us is only that Idea or Sensation in our Mind; and in the hot Body is nothing but Motion that occasions it: And *Heat* (say our Philosophers) is no more in the Fire that burns our Finger, than Pain in Needle that pricks it. No heat is sensible to us, unless the Body, that acts upon our Organs of Sense, has a greater degree of heat than that of our Organs; for if it be faint and weak it is said to be cold.

Actual HEAT [in Physick] is that which is an effect of real elementary Fire.

HEAT [in Geography] is diversified according to the different Climes, Seasons, &c. and arises from the different Angles under which the same Rays strike upon the surface of the Earth: For it is shewn by *Mechanicks*, that a moving Body striking perpendicularly upon another, acts with its whole force; and that a Body that strikes directly, by how much more it deviates from the perpendicular acts with the less force.

The youthful Face of the Heavens intimates their Immortality, Constancy and Incorruptibility, that never falls to decay. The Scepter and Crown imply the Dominion and Power,

Power, that the celestial Globes exercise upon the inferior Edings. The Sun and Moon in the Breast point at the two beautiful Luminaries that shine in the Firmament, and are the immediate Causes under God of Life and Motion, and the Means by which he produces so many Wonders in the World. The Pot full of Flames with a burning Heart, that never consumes, intimates that the almighty Power of God restrains the Enmity and seeming Discord of the Elements, from producing a Confusion, &c.

The following Tables being a curious and admirable Contrivance, not doubting but that they will be acceptable to the curious Reader, I present them.

The Use of the Tables for making hexameter *Latin* Verses, and the manner of the Operation.

Observe these several Directions following;

1. Every Verse made by these Tables, will be an hexameter Verse, and will be made up of just six *Latin* Words.

2. Every one of these six Words are to be produc'd out of these six Tables respectively, viz. the first Word out of the first Table, the second Word out of the second Table, the third out of the third Table; and so of the fourth, fifth and sixth.

3. When you are about to make any Verse by these Tables, you must on a piece of Paper write down any six of the nine Figures at pleasure.

4. That these six Figures are as so many respective Keys to the six Tables. The first Figure towards the left Hand is always to be applied to the first Table, the second Figure towards the right Hand to the second Table, and so every one of the six Tables.

So that the first Figure produces out of the first Table the first Word of the Verse, the second Figure by the second Table the second Word of the Verse; and so every Figure of the six, their respective Words out of their respective Tables.

5. When you have pitched upon six Figures to make your Set of; and written them down on a Paper, the Rule for the Operation is this: With the Figure that belongs to its proper Table, you must number on with the Squares on the said Table, till you come to nine in counting upon the Squares (always reckoning the first Square of the Table one

more than the Figure, except it be nine; and then you are always to count the first Square or Letter of the Table one) at which ninth Square or Letter, you must make a Stop (for in the whole Operation you must never count past nine) and write that Letter down on a Paper, and that is to be the first Letter of the *Latin* Word. From thence proceed, till you come to the ninth Square or Letter beyond, and set that down, and so on, till the Word is wrought out by the Table, which you will know by this, that when the Word is ended, if you number on till the ninth Square, you will find it a Blank. As for Example: Having chosen the Number following, 1 3 2 4 3 6.

The first Figure towards the left Hand being (1) belongs to the first Table, and therefore I call the first Square or Letter of that Table 2, the second Square 3, the third 4, and so on, till I come to 9, at which I stop, and the Letter being (l) I set it down; and because it is to be the first Letter of the first Word, I set it down in a great Letter; as follows.

Lurida Sistra, puto producant fœdera quædam.

Then the next Square, wherein I found that Letter (l) I reckon 1, and count till I come to the 9th Square, again from the said (l) wherein I find the Letter (u) which I put down next to (l) as above, from thence I count to the 9th Square further, and find the Letter (r) which having set down, I count on to the 9th Square beyond, and find the Letter (i) which having set down, I count on again to the 9th Square farther, and find the Letter (d) which having set down, I count on again to the 9th Square, and there find the Letter (a) which having set down, I count on to the 9th Square further, and there find a Blank, by which I know the Word is ended. Which is *Lurida*, as in the Verse.

To work the second Word out of the second Table.

The second Figure being 3, I apply it to the second Table, and call the first Square thereof 4, the second 5, the third 6, and so reckon the Squares in Order, as in the first Table; and finding therein the Letter (s) which having written down on the Paper in the same Line with *Lurida* at a convenient Distance, because it is to begin another Word, and beginning from the Square, in which I found (s) I count the Squares onward, till I come to the 9th, and there finding the Letter (i) I write down, and then proceed to count on, till I come to the 9th Square, and finding the Letter (t) having set it down, I count on to the 9th Square, and finding the Letter (r) which I set down, I count to the 9th Square, and finding the Letter (a) and counting on to the 9th Square, I find it a Blank, by which I find the Word is ended, which is *Sistra*.

To work the third Word out of the third Table.

I apply to it the 3d Figure in Order, which is 2, and therefore call the first Square of that Table 3, the second Square 4, the third 5, and so orderly, till I number to the 9th Square, in which finding the Letter (p) having set it down in the same Line at a convenient Distance; because it is to begin another Word, I count from that Square, till I come to the 9th, and finding the Letter (n) I set that down, and proceed to the next 9th Square, and finding the Letter (t) which having set down, I count from that Square to the next 9th, and finding the Letter (o) I set that down, and proceeding thence to the next 9th find a Blank, by which I know the Word is finished, and is *Puto*.

To work out the fourth Word of the Verse out of the fourth Table.

I apply the 4th Figure in Order, which is 4 to the 4th Table, and count the first Square of it 5, the second 6, and so proceeding to the 9th Square, where finding the Letter (p) I write it down in the same Line at a convenient Distance, because it is the first Letter of a Word, and proceeding to the next 9th Square, I find the Letter (r) which having written down, I proceed to the next 9th Square, and find the Letter (o), and in the next 9th Square the Letter (d), in the next 9th the Letter (u), in the next 9th (c), in the next 9th (u), in the next 9th (n), in the next 9th (t), and in the next 9th a Blank, by which I find the Word is ended, and is *Producant*.

To work the fifth Word of the Verse out of the fifth Table.

The fifth Figure 3 I apply to the first Square of the 5th Table, calling it 4, and counting to the 9th Square, as before I find (f), and thence to the 9th (æ), and thence to the 9th (d), and thence to the 9th (e), and thence to the 9th (r), and thence to the 9th (a), and thence to the 9th finding a Blank, I perceive the Word is finished, which is *Fœdera*.

To work the sixth Word of the Verse out of the sixth Table.

The sixth and last Figure of the set being 6, I apply it to the first Square of the 6th Table, and counting it 7, count to the 9th Square, I find (g) which being set down as before, I proceed to the next 9th and find (u); and in the next 9th

9th (e), in the next (d), in the next (a), in the next (m), and in the next a Blank, by which I know the Word is ended, and is *quædam*, and the whole Line is:

Lurida Sifra, puto, producant fœdera quædam.

The following Tables being a curious and admirable Contrivance, not doubting but that they will be acceptable to the curious Reader, I present them.

The Use of the Tables for making hexameter *Latin* Verses, and the manner of the Operation.

Observe these several Directions following;

1. Every Verse made by these Tables, will be an hexameter Verse, and will be made up of just six *Latin* Words.

2. Every one of these six Words are to be produc'd out of these six Tables respectively, *viz.* the first Word out of the first Table, the second Word out of the second Table, the third out of the third Table; and so of the fourth, fifth and sixth.

3. When you are about to make any Verse by these Tables, you must on a piece of Paper write down any six of the nine Figures at pleasure.

4. That these six Figures are as so many respective Keys to the six Tables. The first Figure towards the left Hand is always to be applied to the first Table, the second Figure towards the right Hand to the second Table, and so every one of the six Tables.

So that the first Figure produces out of the first Table the first Word of the Verse, the second Figure by the second Table the second Word of the Verse; and so every Figure of the six, their respective Words out of their respective Tables.

5. When you have pitched upon six Figures to make your Set of; and written them down on a Paper, the Rule for the Operation is this: With the Figure that belongs to its proper Table, you must number on with the Squares on the said Table, till you come to nine in counting upon the Squares (always reckoning the first Square of the Table one

more than the Figure, except it be nine; and then you are always to count the first Square or Letter of the Table one) at which ninth Square or Letter, you must make a Stop (for in the whole Operation you must never count past nine) and write that Letter down on a Paper, and that is to be the first Letter of the *Latin* Word. From thence proceed, till you come to the ninth Square or Letter beyond, and set that down, and so on, till the Word is wrought out by the Table, which you will know by this, that when the Word is ended, if you number on till the ninth Square, you will find it a Blank. As for Example: Having chosen the Number following, 1 3 2 4 3 6.

The first Figure towards the left Hand being (1) belongs to the first Table, and therefore I call the first Square or Letter of that Table 2, the second Square 3, the third 4, and so on, till I come to 9, at which I stop, and the Letter being (l) I set it down; and because it is to be the first Letter of the first Word, I set it down in a great Letter; as follows.

Lurida Sistra, puto producant fœdera quædam.

Then the next Square, wherein I found that Letter (l) I reckon 1, and count till I come to the 9th Square, again from the said (l) wherein I find the Letter (u) which I put down next to (l) as above, from thence I count to the 9th Square further, and find the Letter (r) which having set down, I count on to the 9th Square beyond, and find the Letter (i) which having set down, I count on again to the 9th Square farther, and find the Letter (d) which having set down, I count on again to the 9th Square, and there find the Letter (a) which having set down, I count on to the 9th Square further, and there find a Blank, by which I know the Word is ended. Which is *Lurida*, as in the Verse.

To work the second Word out of the second Table.

The second Figure being 3, I apply it to the second Table, and call the first Square thereof 4, the second 5, the third 6, and so reckon the Squares in Order, as in the first Table; and finding therein the Letter (f) which having written down on the Paper in the same Line with *Lurida* at a convenient Distance, because it is to begin another Word, and beginning from the Square, in which I found (f) I count the Squares onward, till I come to the 9th, and there finding the Letter (i) I write down, and then proceed to count on, till I come to the 9th Square, and finding the Letter (t) having set it down, I count on to the 9th Square, and finding the Letter (r) which I set down, I count to the 9th Square, and finding the Letter (a) and counting on to the 9th Square, I find it a Blank, by which I find the Word is ended, which is *Sistra*.

To work the third Word out of the third Table.

I apply to it the 3d Figure in Order, which is 2, and therefore call the first Square of that Table 3, the second Square 4, the third 5, and so orderly, till I number to the 9th Square, in which finding the Letter (p) having set it down in the same Line at a convenient Distance; because it is to begin another Word, I count from that Square, till I come to the 9th, and finding the Letter (u) I set that down, and proceed to the next 9th Square, and finding the Letter (t) which having set down, I count from that Square to the next 9th, and finding the Letter (o) I set that down, and proceeding thence to the next 9th find a Blank, by which I know the Word is finished, and is *Puto*.

To work out the fourth Word of the Verse out of the fourth Table.

HUSKANAWING, a Solemnity practised by the *Virginian Indians*, once every fourteen or sixteen Years. It is an Institution or Discipline that all young Men must pass under before they can be admitted to be of the number of Great Men, Officers, or *Cockarouses* of the Nation.

The choicest and briskest young Men of the Town, and such only as have acquired some Treasure by their Travels and Hunting, are chosen out by the Rulers to be *Huskanaw'd*, and who ever refuses to undergo this Process, dares not remain among them.

The Ceremony is performed after the manner following: After the performance of several odd preparatory Ceremonies, the principal part of the Business is to carry them into the Woods, and there to keep them under Confinement, and destitute of all Society for several Months, giving them no other Sustainance but the Infusion or Decoction of some poisonous intoxicating Roots; by vertue of which Physick, and the severity of the Discipline which they undergo, they become stark mad: In which raving Condition they are kept 18 or 20 Days. During these Extremities they are shut up Night and Day in a strong Inclosure, made on purpose, in shape like a Sugar-loaf, and every way open like a Lattice, for the Air to pass through. In this Cage, after they have been shut up till the Doctors find they have drank sufficiently of the *Wyfocan* (as they call this mad Potion) they gradually restore them to their Senses, by lessening the Intoxication of their Diet, they bring them back into the Town, while still wild and crazy, through the violence of the Medicine.

It is pretended that they in this time drink so much of the Water of *Lethe*, that they perfectly lose all remembrance of former things, even of their Relations, Parents, and Language; and after this they are very fearful of discovering any thing of their former remembrance; for if such a thing should happen to any of them, they must immediately be *Huskanaw'd* again: And the second time the Usage is so severe, that seldom any one escapes with his Life. Thus they must pretend to have forgot the very use of their Tongues, so as not to be able to speak, nor understand any thing that is spoken, till they learn it again. And they are for some time under the guard of their Keepers, who constantly wait upon them every where, till they have learnt all things perfectly over again.

The undergoing this Discipline, is, with them, the most meritorious thing in the World, in order to Preferments to the greatest Posts in the Nation, which they claim as their undoubted Right at the next Promotion.

The *Indians* pretend that this violent Method of taking away their Memory, is to release the Youth from all their childish Impressions, and from that strong Partiality to Persons and Things which is contracted before Reason takes place.

They hope by this Proceeding to root out all the Prepossessions and unreasonable Prejudices which are fixt in the Minds of Children; so that the young Men, when they come to themselves again, their Reason may act freely, without being biassed by Custom and Education.

Thus also they become discharged from the Remembrance of any ties of Blood, and are established in a state of equality and perfect freedom to order their Actions and dispose of their Persons, without any other controul than that of the Law of Nature.

And in another place he tells us of a very antient Statue of *Venus* at *Delos*, which instead of Feet had only a square Stone. And some imagine the foundation of Adoration being paid to Stones, was from the Stone that *Saturn* is fabled to have swallowed.

One thing is remarkable in these Stones, as particularly in the square Stone that represented the God *Mars* at *Petra* in *Arabia*, that their colour was commonly black, by which it should seem, that that Colour, in those Times, was thought most solemn, and becoming things dedicated to sacred Uses.

And Writers relate, that the Princes of *Tartary* use it for the same Purpose at this Day. And it is the Matter of Wicks the perpetual Lamps were made. The Stone, which is the Matter of it, is found in several Places, as in *China*, *Italy*, and *Wales*; and some also in *Scotland*. *Pliny* relates, that he was himself at a great Entertainment, where the Napkins of this Cloth being taken foul from the Table, were thrown into the Fire, and by that means were taken out fairer and whiter than if they had been washed. As to the manner of making this Cloth, *Paulus Venetus* relates, that he was informed by an Intendant of the Mines in *Tartary*, that this Mineral (that is found in a certain Mountain there) is first pounded in a Brass Mortar, to separate the earthy Part from it, and that it is afterwards washed, and then spun into Threads like Wooll, and afterwards woven into Cloth. And that, when it is foul, they throw it into the Fire for an Hour's Time, from whence it comes out unhurt, and as white as Snow.

But in two Trials that were made before the Royal Society in *London*, a Piece of this Cloth, of twelve Inches long and six broad, which weigh'd twenty four Drams, being put into a strong Fire for some Minutes, it lost one Dram each Time.

IRON [*Iron*, *Sax.*] a hard, fusible, malleable Metal. Iron is accounted the hardest of all other Metals, as being the most difficult to melt; and yet it is one of the lightest Metals, and easiest to be destroy'd by rust, by reason of the Steams which proceed from it: it is engendered of a most impure Quicksilver, mixed with a thick Sulphur, filthy and burning.

IRON [with *Chymists*] is called *Mars* and represented by this Character ♂ which is an Hieroglyphick and denotes Gold at the Bottom; only its upper Part, too sharp, volatile and half corrosive, which being taken away the Iron would become Gold.

The first Character of Iron is, That it is the heaviest of all Bodies after Copper. Its second, That it is the least ductile, the hardest and most brittle of all Metals. Third, That it is very fixed, as to its metaline Part, not sulphurous one. Iron being well purged of its Sulphur by a vehement Fire, becomes harder, compacter, and somewhat lighter, and is called Steel. Fourth, It ignites before it fuses, and fuses with much difficulty; and contrary to the Nature of all other Metals, the more it is ignited, the softer and more ductile it becomes: being scarce flexible or malleable at all before ignition. Fifth, It is dissoluble by almost all Bodies in Nature, *i. e.* that have any degree of Activity, as Salt, Dew, the Breath, Fire, Water, Air, &c. Sixth, It is very Sonorous and Elastick, tho' the Sound it yields is less sweet than that of Copper. Seventh, Of all Bodies it is the only one that is attracted by the *Load-stone*.

IRON Oar, is found in the Mines, in Grains and Lumps, and being melted and burned in Forges, is brought into Forms by main force of Fire. Iron being heated red hot, and then put into Water hardens it; and by the often doing so, it becomes Steel, which is more stiff and hard; but yet more brittle; but has more of a springy Nature to leap back, than any other Metal; for both Steel and Iron have abundance of Pores, which go turning and winding like Screws, by means of which it approaches to the *Load-stone*, and is said to be a-kin to the *Load-stone*, being dug out of the same Mines. If a Plate of Iron be put in the Fire, and made red hot, it (is said) will come out longer than it was when it was put in.

As to her marrying with her Brother *Jupiter*, they tell us, that she was not willing to consent to it; but *Jupiter* effected it by the following Stratagem. He took upon him the shape of a Cuckow, and in a Storm lighted upon her Lap, and *Juno* out of Pity, to shelter it from the Weather, put it into her Bosom; but when the subtil Bird felt the warmth of her Body, it took again the Form of *Jupiter*, and obtain'd his desire by a promise of Marriage; and on this Account, at *Argos*, a Cuckow was adored for *Jupiter*.

JUNO was represented upon a Throne, sitting adorn'd with a Crown on her Head that touch'd the Clouds, and a Scepter in her Hand, and round about her the fair and beautiful *Iris* (the Rainbow) and attended by Peacocks (her beloved Bird) on both Sides.

He was call'd the Father of the Gods, and the King of Men, because Nature is the Cause of the Essence of Things, as Parents are of Children; and he only had the Power to

handle the Thunderbolts, and to hold the World in Subjection. He had a great many Names, as *Jupiter Capitellinus*, *Jupiter Inventor*, *Jupiter Feretrius*, &c. and as many Statues, and many Temples erected to him.

The *Heathens* painted him like an old Man sitting upon a Throne with a Crown upon his Head, clothed with a rich Garment sparkling with Stars, holding in his Hand two Globes, which represented Heaven and Earth, and *Neptune's* Trident under him, and a Carpet representing the Tail and Feathers of a Peacock. Sometimes they pictured him with Thunderbolts in his Hand, in the Form of crooked Iron Bars, sharp at the End, joined together in the Middle.

The *Egyptians* worshipped him in the Figure of a Ram, and represented his Providence by a Scepter, with a great Eye upon the Top of it.

JUPITER [by modern *Painters*] is represented with long black curled Hair, in a purple Robe trimm'd with Gold, and sitting on a golden Throne, or the Back of an Eagle (which he chose for his Bird, because when he went to deliver his Father out of his Confinement, an Eagle gave him an Omen of happy Victory) encompassed with bright yellow Clouds, and holding in his Hand Thunderbolts.

JUPITER [*Hieroglyphically*] was by the Antients represented without Ears, to intimate that God seems not to listen or take notice of the profaneness of Men, nor of their impious Discourses: And sometimes with one hundred Hands, and as many Feet, to intimate the multiplicity of Effects, which proceed from his Agency, and that he sustains all Things from falling into confusion.

JUSTINGS } [joutes of jouter, F. to run at Tilts] were
JUSTS } Exercises used in former Times by such Persons, who desir'd to gain Reputation in Feats of Arms, of whatsoever Degree or Quality, from the King to the private Gentlemen; they were usually performed at great Solemnities, as Marriages of Princes; and also on other Occasions. The Time and Place being appointed, Challenges were sent abroad into other Nations to all that desir'd to signalize themselves. And Rewards were appointed by the Prince for those that came off Conquerors. As for the Place it was various; in the Year 1395 there was great Justing on *London-Bridge*, between *David*, Earl of *Craford* in *Scotland*, and the Lord *Wells* of *England*, &c. In the Time of King *Edward* the III. Justings were frequent in *Cheap-side*, and on the *North-side* of *Bow-Church*, there was a Building of Stone erected, call'd *Sildam* or *Crownfield*, to see the Justings that were frequently perform'd there, between the End of *Soper-Lane* and the *Cross*. It was built on this Occasion, in the Year 1330 there was a great Justing of all the stout Earls, Barons and Nobles of the Realm, which lasted three Days, where Queen *Philippa*, with many Ladies, fell from a Scaffold of Timber, but received no Harm; after which the King built it strongly of Stone for himself, the Queen and Persons of high Rank, to behold the Justings. This *Sildam* remained till the Time of *Henry VIII*, as it appears in that he came thither, dress'd in the Habit of a Yeoman of the Guard, with a *Patison* on his Shoulder, and having taken a View of the Watches of the City, went away undiscovered.

Smithfield also was a Place for performing these Exercises; in the Year 357 great and royal Justs were held in *Smithfield*, there being present the Kings of *England*, *France* and *Scotland*, and their Nobility. And in the time of *Richard II*. royal Justs and Tournaments were proclaimed by Heralds in several Courts in *Europe* to be performed in *Smithfield*, to begin on Sunday next after the Feast of *St. Michael*. At the Day appointed there issued out of the Tower, about 3 in the Afternoon, 60 Coursers apparelled for the Justs, upon every one an Esquire of Honour, riding a soft Pace, then came forth 60 Ladies of Honour mounted upon Palfreys riding on the one side richly apparelled, and every Lady led a Knight with a Chain of Gold. Those Knights that were of the King's Party had their Armour and Apparel adorn'd with white Harts, and Crowns of Gold about the Harts Necks, and so they rode thro' the Streets of *London* to *Smithfield*, with a great number of Trumpets and other Instruments of Musick before them. Where the Ladies that led the Knights, were taken down from their Palfreys and went up to their Seats prepared for them. The Esquires of Honour alighted from their Coursers, and the Knights mounted. And after the Helmets were set on their Heads, and they were ready at all Points, Proclamation was made by the Heralds, and then the Justs began. These Justs lasted many Days with great Feasting. The manner of it was thus, the Ground being railed about, in which the Justers were to exercise, the Contenders were let in at several Barriers, being compleatly armed from Head to Foot, and mounted on the stoutest Horses; who after they had pay'd their respects to the King, the Judges and Ladies, they took their several Stations, and then the Trumpets sounded and they having couched their Lances, that is, having set the But-end against their Breast, the Point toward their Adversary, spurred their Horses, and ran furiously one against another, so that the Points of their Spears lighting upon the Armour of each other, gave a terrible shock, and generally flew to pieces.

If neither Party received any injury, they wheel'd about, took fresh Lances, and ran a 2d time, and so a third, and if neither suffered any disgrace in 3 Encounters, they both came off with Honour.

There were many Circumstances relating to these Performances; as if a Man was unhorsed; he was quite disgraced, or if he was shaken in the Saddle, or let his Lance fall, or lost any Piece of his Armour, or wounded his Antagonist's Horse, &c. all which were accounted disreputable. And there were also certain Rules for distributing the Prizes to them that behaved themselves with the greatest Gallantry.

KNIGHT [*knecht*, *Teut.* cnicht, *Sax.*] a Person whom the

King has singled out from the common Class of Gentlemen,

and dignified with the honour of Knighthood. In antient

Times there were 6 Particulars required in him that was to

be made a Knight. 1. That he was no Trader. 2. That

besides other things he were not of servile Condition. 3. That

he should take an Oath that he would not refuse to die for the

take of the Gospel and his Country. 4. His Sword was to

be girt on by some Nobleman. 5. That he should have the

Badge of Knighthood put upon him. And, 6thly, That he should be enrolled in the King's Books. It was also required, that Knights should be brave, undaunted, expert, provident and well behaved. Christian Kings appointed many religious Ceremonies to be observed at the Creation of Knights, and none were admitted to the Order of Knights, but such as had merited the Honour by some commendable and extraordinary Exploits. They were antiently distinguished by a Belt, a Target, a Sword, or some martial Token. But now the Honour being grown cheap, these Ceremonies have been laid aside, and there goes nothing now to the making a Knight in *England*, but the King's touching him with a Sword as he kneels, and saying, *Rise up Sir R. N.*

KNIGHTS Bannerets, the Ceremony of their Creation is thus. The King, or his General, at the head of his Army, drawn up in order of Battle after a Victory, under the royal Standard display'd, attended by all the Officers and the Nobility of the Court, receives the Knight, led by two Knights of Note or other Men renowned in Arms, carrying his Pennon or Guidon of Arms in his Hand; being preceded by the Heralds, who proclaim his valiant Atchievements, for which he has merited to be made a Knight Banneret, and to display his Banner in the Field; then the King or the General says, *Advances toy Banneret*, and causes the Point of his Pennon to be rent off, and the new Knight is sent back to his Tent, the Trumpets sounding before him, and the Nobility and Officers attending him, where they are nobly entertained. This Order is certainly most Honourable, because never conferr'd but upon the performance of some heroick Action in the Field; whereas all other Orders are bestow'd by Favour, or other meaner Motives. But there have been none of these Knights made for many Years past.

KNIGHTS Baronets, is a modern degree of Honour, and next to a Baron; they have precedence before all Knights, except those of the Garter, Bannerets and Privy-Counsellors, and the Honour is hereditary in the Male Line. This Order was first instituted in the Year 1611 by King *James I.* they are created by Patent, the Proem whereof signifies, that it is for propagating a Plantation in the Province of *Ulster* in *Ireland*, for which purpose each of them was to maintain thirty Soldiers in *Ireland* for three Years, allowing each Soldier 8*d.* per Diem, the whole Sum of which was paid into the *Exchequer* upon passing the Patent. They are to bear in a Canton, or in an Escutcheon, the Arms of *Ulster*, viz. a Field Argent, a sinister Hand couped at the Wrist Gules.

BARONS [prob. of *Barones*, *L.* Men of Valour] are Peers of *England*, but of the lowest Dignity, and as such sit in Parliament, as all the Peers of *England* do by their Baronies, tho' they be Dukes, Marquesses, or Earls besides, and likewise Archbishops and Bishops have Baronies annexed to them. Barons are of three sorts.

BARONS [by *Tenure*] are Bishops, who hold their Baronies by vertue of their being chosen to their Sees.

BARONS [by *Writ*] are such as are called to sit in Parliament by their Sovereign, without any precedent Title.

BARONS [by *Patent*] their Title is, *Right Noble Lord*; King *Charles II.* gave the Barons a Circle of Gold, with six Pearls set close to the Rim. He is likewise allowed to have the cover of his Cup held underneath while he is drinking; and a Baroness may have her Train held up in the Presence of a Viscountess. The manner of erecting a Baron by Patent is as follows, he appears in Court in his long Robe and Hood, attended by several Persons of Quality; two Heralds walk before him, followed by *Garter King at Arms*, holding the King's Writ; a Baron, supported by two Gentlemen of distinction, brings the Robe or Mantle, and so they enter the King's Presence, kneeling three times; then *Garter* delivers the Writ to the Lord Chamberlain, and when in reading they come to the Word *Investimus*, the King puts on his Mantle, and the Writ being read, declares him and his Heirs Barons.

KNIGHTS Batchelors [either of *Bas Chevaliers*, *F. i. e.* low Knights, or of *Baccalaria*, a kind of Fees or Farm, consisting of several Pieces of Ground, each of which contained twelve Acres, or as much as two Oxen would Pough; the Possessors of which *Baccalaria* were called *Batchelors*; others derive the Name of *Batcheller*, *F.* to Combat or Fight] they were antiently called, as being the lowest Order of Knights, or inferior to Bannerets. They were obliged to serve the King in his Wars at their own Expence, for the space of forty Days. They are now called *Equites Aurati* in *Latin* *Equites*, i. e. Horsemen, because they were to serve on Horseback; and *Aurati*, golden or gilded, because they had gilt Spurs given them at their Creation. This Dignity was at first confin'd to military Men, but afterwards it was conferr'd on Men of the Robe. It was an antient Ceremony at the Creation

Creation, to honour the Knights with the Girdle of Knight-hood; which he who received was to go to Church and solemnly to offer his Sword upon the Altar, and to vow himself to the Service of God. In process of Time, besides the Girdle and Sword, gilt Spurs were added for the greater Ornament. The Ceremony of the Creation is very simple, the Candidate kneels down, and the King touches him lightly with a naked Sword, saying, *Sois Chevalier au nom de Dieu, F. i. e. Be a Knight in the Name of God*; and afterwards *Avance Chevalier A. B.* These may be said to be the only Knights in England, besides those of the Garter and of the Bath, who are of a much higher Sphere; for *Bannerets* have been long disused, and *Baronets* are not properly Knights. When a Knight had committed a capital Offence, it was usual publicly to degrade and deprive him of his honour of Knight-hood, which was done by ungirding his military Belt, taking off his Sword and breaking it, and hewing off his Spurs with a Hatchet, plucking his Gauntlet from him, and reversing his Escutcheon of Arms.

KNIGHTS of the BATH, this Order of Knighthood is of no less Antiquity than the Times of our Saxon Ancestors, and tho' the Original of it cannot be exactly determined, yet it appears that Geoffrey of Anjou, before his Marriage to Maud the Empress, Daughter to our King Henry I. was thus made a Knight at Rome, An. 1227. tho' Camden and others write that it was instituted by Richard II. and Henry IV. An. 1339. upon this occasion, King Henry being in the Bath, and being inform'd by some Knight that two Widows were come to demand Justice of him, he immediately leap'd out of the Bath, saying, *he ought to prefer doing Justice to his Subjects before the Pleasure of the Bath*; and thereupon created Knights of the Bath. Some say these Knights were made within the Lists of the Bath, and that King Richard ordain'd that there should be no more than four of them; but King Henry IV. encreased them to forty six: their Motto was *Tres in uno, L. i. e. Three in one*, signifying the three theological Virtues. At the Creation of these Knights there were several religious Rites and Ceremonies performed, which usually belonged to Hermits and other holy Orders. First, When the Esquire to be knighted came to the Court, he was to be received by the King's Officers, and to have two Esquires of note to attend him; and if he came before Dinner, he was to carry up one Dish to the King's Table, after which those Esquires were to conduct him to his Chamber, and at Night he had his Beard shav'd and his Hair cut round. Then the King commanded his Chamberlain to go to the Chamber of this intended Knight, attended by several Knights and Esquires, with Musick, Singing Dancing, and there to inform him of Feats of Chivalry. Then the Esquire was put into the Bath, and when taken out put into a Bed without Curtains, there to lie till he was dry, and afterwards cloth'd with a Robe of Ruffet with long Sleeves, having a Hood to it, like that of an Hermit; then the old Knights conducted him to the Chapel, being accompanied with Musick, and other Esquires, Dancing and Sporting before him, where being entertain'd with Wine and Spices, they were dismiss'd with Thanks; the new Knight was to stay in the Chapel all Night, and spend it in Prayer, and the next Morning to confess his Sins to the Priest; and while Mass was saying, a Taper was burning before him, which he held in his Hand during the Gospel; at the Elevation an Esquire took off his Hood from his Head, and held it till the last Gospel. And Mass being ended, the same Esquire offered the Candle at the Altar and a Penny or more. After this the new Knight was put to Bed, and lay there till day Light. Then the Chamberlain and other Company went to his Chamber and said, *Sir good Morrow to you, it is Time to get up and make your self ready*: and having dress'd him, they mounted on Horseback, they conducted him to the Hall with Musick, a young Esquire carrying his Sword before him, holding it by the Point. Being come to the Hall Door, he was received by the Marshals and Ushers, who desired him to alight, and the Marshal was either to have his Horse or an hundred Shillings for his Fee; and being conducted up the Hall, there he stay'd while the King came, the young Esquire still holding his Sword. The King being come, he took one of the Spurs from the Chamberlain, and delivering it to some Person of Note, commanded him to put it on his right Heel, which was done kneeling, and the other Spur was put on by another Knight; which being done, the Knight holding up his Hands together, the King girt on his Sword, and embracing him about the Neck, said to him, *Be thou a good Knight*, kissing him. This being done, the Knights conducting him to the High Altar in the Chapel, he there promised to maintain the Rights of the Holy Church during his whole Life, and then ungirt his Sword and offered it to God, praying to God and the Saints that he might keep that Order

to the end, after which he drank a Draught of Wine. Upon his going out of the Chapel, the King's Master Cook stood ready to take off his Spurs for his Fee, saying to him, *I the King's Master Cook, am come to receive your Spurs for my Fee; and if you do any thing contrary to the Order of Knighthood (which God forbid) I shall back your Spurs from your Heels*. This being done, he was conducted again to the Hall by the Knights, where he sat the first at the Knight's Table, the Knights being about him, to be served as the other were; but was neither to Eat nor Drink at the Table, nor spit, nor look about him upwards or downwards any more than a Bride. But one of his Governors was to hold a Handkerchief before him when he was to spit, and when the King was departed, he was to be attended to his Chamber by Knights, Musick, &c. who taking their leave of him went to Dinner. When the Company were retired, he was disrobed and his Attire was to be given to the King at Arms or that Herald that attended, or to the Minstrels, with a Mark of Silver, if he were a Knight Bachelor; two Marks, if a Baron, and four, if an Earl or superior Rank; and his Ruffet Night-Cap or a Noble was given to the Watch. MAGICK [*μαγία* Gr.] is by some distinguished into 4 kinds.

Natural MAGICK, natural Philosophy, or the application of natural active Causes to passive Causes; by means of which many surprizing, but natural, Effects are produced; but the *Arabians* corrupting it, and filling it with many superstitious Vanities, the Name of it began to be understood in an ill Sense.

Natural MAGICK [according to the Description of some] is by Art and Industry to produce Vegetables before their natural Time, as ripe Roses, Figs, &c. in *February*; also the causing Lightning, Thunder, Rain, Winds, Transfigurations and Transmutations of Animals, such as *Roger Bacon* is said to have performed by *Natural Magick*.

Divine MAGICK, which is performed by the immediate Grace of the Almighty, and depends on that Spirit and Power, which discovers it self in noble Operations; such as Prophecy, Miracles; such Magicians were *Moses*, *Josua*, the Prophets and Apostles.

Celestial MAGICK, attributes to Spirits a kind of Rule or Dominion over the Planets, and to the Planets, a Dominion over Men, and on this it raises a ridiculous kind of System, nearly bordering on judiciary Astrology.

White MAGICK, call'd also *Theurgick*, performed by the Assistance of an Angel, which, upon account of Religion, enjoins Fasting, Piety and Purity, that the Soul which is desirous of Commerce with the superiour Deities, may not be in any thing diverted by the Body, being sinful or polluted.

MAGICK Geotetick, Magick performed by the Assistance of a Dæmon.

Superstitious MAGICK, is performed by the Invocation of Devils; and the Effects of it are very Evil and Wicked, tho' very strange and surpassing the Powers of Nature; and are said to be performed by means of some compact, either express or tacit, with Evil Spirits. But their Power is not near what is imagined; nor do they produce half the Effects commonly ascribed to them.

Mathematical MAGICK, is that which, by mathematical Learning, and the Assistance of the celestial Influences, produces seemingly miraculous Works; as, walking and speaking Images, as also by mechanical Science, and rare Art beyond the reach of vulgar Capacities. See *Bishop Wilkins*, &c.

MAGICK Lanthorn, a small Optick Machine, by means of which are represented on an opposite Wall in an obscure Place, many monstrous and hideous Shapes, terrifying to the beholder; and which, by those who are ignorant of the Device, are thought to be effected by Magick.

MAGICIAN [*magicien*, F. *magus*, L. of *μαγος*, Gr.] the *Persians* called those *Magus* or Magicians, that the *Greeks* called *φασσους*; the *Latins*, *Sapientes*; the *Gauls*, *Druids*; the *Egyptians*, *Prophets* or *Priests*; the *Indians*, *Gymnosophists*; the *English*, *Cunning Men*, *Wizards* or *Conjurers*.

It is called the great Charter, either because it contained more than many other Charters; or because of the great and remarkable Solemnity in the denouncing Excommunication and direful Anathemas, against the Infringers of it. For when King Henry III. swore to the observation of this Charter, the Bishops holding lighted Candles, extinguished them, and then threw them on the Ground, and every one said, *thus let him be extinguished and stink in Hell, who violates this Charter*. He was never grateful to *Jupiter*, and in his mi-

nority was nursed by *Thero*, in the Northern Climates, that are inclinable to War. He lay with *Venus* the Wife of *Vulcan*, who, by his Craft, had made an Iron Net, and cast it about them, as he found them naked; which Net was so artificially made, that neither of them could disentangle themselves; and then he called all the Gods to see them in that Posture, which caused much Laughter among them; but at length, by the Entreaty of *Neptune*, he set them at Liberty.

They would not suffer his Statues and Images to be erected in their City; but without it, to intimate their Inclination to foreign, rather than civil War. His Priests were called *Salii* (of *Saliendo*) because they danced and skipped about his Altars, which were erected under the same Root with those of *Venus*, to express the happy Influences that the Stars *Mars* and *Venus* bestowed on Children, when they meet in their Nativities.

His common Office was to be the common messenger and interpreter of the Gods, and therefore had Wings on his Head and Heels, and a *Caduceus*, which is a Rod with two Serpents twisted round it, in his Hand, in Token of Peace, and Amity. Other of his Offices were to guard the Ways, and guide the decess'd Souls into Hell; and therefore the Poets say, that none can die till Mercury comes to break the Tie that unites the Body and Soul together; and according to the Opinion of the *Metempsychosists*, when

when these Souls have passed many Years in the *Elysian Fields*, and have drank of the River *Lethe*, he, by Virtue of his Rod, causes them to pass into other Bodies to live again.

To him is attributed the Invention of the Lute, and a kind of Harp which he presented to *Apollo*. He was accounted the God of Eloquence, and also of Thieves, having been a very dexterous Thief himself, as appears in his stealing his Sword from *Mars*, and a Pair of Tongs from *Vulcan*, *Venus's* Girdle from her, *Neptune's* Trident from him, and *Apollo's* Arrows and his Beasts, when he fed *Admetus's* Cattle. He had also contriv'd to have stolen away *Jupiter's* Thunder-Bolts; but omitted to put it in Execution out of fear.

Mercury is said to have had one Son by his Sister, the Goddess *Venus*, who was named *Hermaphrodite*, who happening to meet with the Nymph *Salmacis* at a Fountain; the Gods, at her request, made both their Bodies but one, in such a manner, that both Sexes were conserved intire. By this Fable the Poets would intimate the Union that should be between married Persons, who ought to be as one Body and one Heart.

He was much revered by the *Egyptians*, who worshipped him in the Image of a Dog, called *Anubis*.

It is very probable that the famous *Trismegistus*, who flourished in the first Ages of the World, was worshipped under the Name of *Mercury*. His Statue was usually placed in Markets, and therefore he was call'd *Ἀγορεύς*; he was painted with yellow Hair, and a Purse in his Hand, to intimate the Advantage that is to be expected from Learning and Diligence. His Statues were also plac'd in High-ways, unto which they offered their first Fruits. His Image was sometimes that of *Hercules Gallicus*, out of whose mouth came forth Chains of Gold, which were joined to the Ears of several little Men that stood at his Feet, to express the Power of Eloquence that enslaves the Auditors.

The Antients also painted him in a Coat of Flame-Colour, with a Mantle of pure White, trimmed with Gold and Silver, his Hair long, yellow and Curled, his Cap or Hat white, with white Wings on it, and on his Feet, holding in his Hand a *Caduceus*, or Rod of Silver, with two Serpents twining.

MERIDIAN [*linea meridiana* of *meridies*, L. Noon or Mid-day] the first meridian is altogether Arbitrary, and therefore Astronomers and Geographers generally make their own meridians. The Antients placed their first meridian at *Fero*, one of the Canary Islands; and from the Place where the meridian cross'd the Equator, number'd their Longitude, Eastward, round the whole Globe; but since the discovery of *America*, every Nation placeth their first meridian at the chief City of their Kingdom; and then from that meridian accounts longitudes East and West upon the Equator.

That Ground which is rich in Mines, is generally barren, and sends forth noxious Steams and Vapours, prejudicial to the Health of Mankind, and the growth of Vegetables.

It is not improbable, but the finding out of Metals in Mines, was owing to the Conflagration of Woods; and *Aristotle* relates, that some Shepherds in *Spain*, having set a Wood on Fire, found melted Silver run down in the same Place.

MINE [in *Gunnery*] a Hole or Pit dug by Pioneers under any Place or Work, having a Passage or Alley about five Foot square, with several turnings and windings, at the End of which is the Place or Hole call'd the *Chamber of the Mine*, which is just under the Work designed to be blown up, which is filled with Barrels of Gunpowder, in order to blow it up.

And that *Vulcan* at this Time did the Office of a Midwife, cleaving *Jupiter's* Skull with a sharp Hatchet, that *Pallas* might creep out. Being thus accoutred, she was held to be the Goddess of War, and to be concerned in all Battles. They attribute to this Goddess the Invention of several Sciences and useful Inventions, as Spinning, Weaving, the Use of Oil, the Art of

colouring Cloth, of Building, and the like, making her the Goddess of Wisdom and all Arts. The *Athenians* paid her a singular Honour and Respect, and instituted several solemn Festivals in honour of this Goddess, which were celebrated with divers rare Spectacles and Expressions of Joy. She refused to be married to any of the Gods, and so led a Virgin Life. In one of those Festivals, the Boys and Girls used to pray to the Goddess for Wisdom and Learning, of which she had the Patronage; and the Youths carried their Masters their Fee or Present, which was call'd *Minerval*.

Minerva represents Wisdom, that is skillful Knowledge join'd with direct Practice, comprehends the understanding of the noblest Arts, the best Accomplishments of the mind, together with all Vertues; but more especially that of Charity.

Socrates is said to have been the first Philosopher, who set himself about the reforming of Manners; for till his Time, the whole Business of the Philosophers, was the Study of the heavenly Bodies; tho' *Pythagoras* shew'd *Socrates* the Way, yet the Specimen that he gave was very imperfect; he deducing his Rules of *Morality*, from the Observations of Nature, which Part of Knowledge he acquired by conversing with the *Egyptian* Priests.

The main Aim of *Pythagoras*'s moral Doctrine, was to purge the Mind from the Impurities of the Body, and from the Clouds of the Imagination. His morality seems to have had more Purity and Piety in it, than the other Systems, but less exactness; his maxims being only a bare Explication of divine Worship, of natural Honesty, of Modesty, Integrity, publick Spiritdness, and other common Offices of Life.

The golden Verses which go under the Name of *Pythagoras*, were attributed to his Disciples, who were as remarkable for the Practice, as the Theory of *Ethicks*. So that in the Time of the first Consuls of *Rome*, his Sect was in that Repute, that to be a wife Man and a *Pythagorean*, were accounted Terms equivalent.

To this morality of *Pythagoras*, *Socrates* added settled Principles, and reduc'd it into method; his main Design was to reform and purge the Philosophy of *Pythagoras*. His whole Doctrine was one continued Lesson of Virtue. He established it as a Rule of Discourse, to treat of the most serious Subjects, without an Air of too much seriousness, knowing that to please, was the surest method to persuade; and therefore his morals gain'd admittance, by a seeming easiness and agreeableness.

That

That Doctrine of morality that was left him by his Master *Socrates*, was improv'd by *Plato*, who carried each Virtue to its last Height and Accomplishment, by mixing his Ideas on the universal Principle of Philosophy thro' the whole Design. His Philosophy abounds with good Lessons, which tend either to the encouragement of Virtue, or discountenancing Vice. *Diogenes* was contemporary with *Plato*, and commenc'd a severe Pique against him, designing to expose the easiness and gentility of *Plato*, by an affectation of Rigour. The Foundation of his morals, were a vain haughtiness and moroseness of Temper. *Plato* first rectified the Doctrine of the Immortality of the Soul, which *Pere Rapin* says, *Socrates* learn'd from *Pythagoras*, *Pythagoras* from the *Egyptians*, and the *Egyptians* from the *Hebrews*, by the Travels and Convert of *Abraham*.

Aristotle form'd the Doctrine of *Plato*, his Master, into a more regular Body, by distinguishing the Characters of publick and private Virtue, &c.

But after all, this morality of *Aristotle's*, as well as that of *Socrates* and *Plato*, is only capable of making a Philosopher; but has not Strength enough to make an honest Man, without the sublime Philosophy of Christianity; tho' this morality had a fine Notion, sufficient to teach a Man to know his Duty; yet it was not sufficient to engage him to love and embrace it.

The morals of *Zeno* and *Epicurus* having made a great Noise in the World, *Ethicks* from that Time began to be cultivated more than any other Part of Philosophy, and the *summum bonum* was the main Subject that was handled about, according to the various Opinions, and sometimes according to the Complexions and Constitutions of Philosophers: Some placing it in one Thing, and some in another, till they had multiply'd to that Degree, that *Varro* reckons up 288 different Opinions. After *Zeno* and *Epicurus*, we find no new Draught or Scheme of morality. Indeed there are *Theophrastus's* Characters, which are very good Lessons of Manners; and *Tully's* Offices, which are founded upon the severest Virtue; and *Seneca's* Morals, which are less pure and exact; and *Pliny* gives us some bright and forcible Strokes of morality; but *Epicletus* is the most rational of the *Stoicks*; but the *Christian* Revelation has opened a way for such refin'd *Ethicks*, that it makes all the Heathen morality appear to be dark and trivial.

The brightness of the *Christian Morality* amazed the *Pagans* themselves; and the Lives of the Primitive Christians were so severely sober, that they were constant Lessons of Morality to the Heathens; which put them upon reducing their Morals to a purer Standard: So that at last it became so severe, as to vie with that of the Christians; and most of the Philosophers, in the Time of *Antoninus*, joined themselves to the *Stoicks*. But, as a certain Author says, all the *Heathens* or *Stoick Morality* appeared to be so weak, that they soon fell into the Contempt of all such as seriously gave themselves to the study of Virtue and a good Life. For as to what *Zeno* taught concerning the Indifference to Pleasure and Pain, Glory and Infamy, Wealth and Poverty, this was never really found, but under the Discipline of Faith. And besides the Contentment and Felicity under Sufferings, which was so much boasted of by the Heathen Sages, it was never made good but by Christian Examples: And that the sum of the philosophical Virtue of the Heathens, upon a strict inquiry, seemed to be nothing but an Art to conceal Mens Vices, and to flatter their Pride; because the utmost that could perform, was only to fill the Mind with false Ideas of Constancy and Resolution: But the Christians brought them into an Acquaintance with their real Infirmities, and instructed them how to restrain their irregular Desires, which they were allow'd to enjoy by their former Institutions. The new Evangelical Morals were established by the Doctrine of these new Lights; as *St. Basil*, *St. Chrysostom*, *St. Jerom*, *St. Ambrose*, *St. Austin*, &c. have been the most eminent ancient Expositors of this divine morality.

MOTHER Tongues, are such Languages as seem to have no dependance upon, derivation from, or affinity with one another. Some have been of Opinion, that at the Confusion of Languages at the Building of *Babel*, there were formed 70 or 72 Languages. But Bishop *Wilkins* and others are of Opinion that there were not so many, nor that Men did then disperse into so many Colonies.

There have been, and at this Time there are, in the World a far greater Number. *Pliny* and *Strabo* relate that in *Dioscuria*, a Town of *Colchus*, there were Men of 300 Nations, and so many distinct Languages, did resort on account of Traffick.

Some Historians relate, that in every 80 Miles of that vast Continent, and almost in every particular Valley of *Peru*, a distinct Language or mother-Tongue to them was spoken.

And *Purchase* speaks of a 1000 distinct Languages spoken by the Inhabitants of North *America*, about *Florida*.

Julius Scaliger asserts, that there are no more than eleven mother Tongues used in *Europe*, of which four are of more general Use and large Extent, and the other seven of a narrower Extent and Use. Those of the larger Extent are

1. The *Greek*, which in ancient Times was used in *Europe*, *Asia* and *Africa*, which also did by dispersion and mixture with other People, degenerate into several Dialects. As, the *Attick*, *Dorick*, *Eolick*, *Ionick*.

2. The *Latin*, which, tho' it is much of it derived from the *Greek*, had antiently four Dialects, as *Petrus Crinitus* shews out of *Varro*. From the *Latin* are derived the *Italian*, *Spanish* and *French*.

3. The *Teutonic* or *German*, which is now distinguished into upper and lower.

The upper *Teutonic* has two notable Dialects. 1. The *Danish*, *Scandian*, or it may be the *Gothick*; to which the Language used in *Denmark*, *Sweden*, *Norway* and *Island* do appertain. 2. The *Saxon*, from which much of the *English* and *Scotch* are derived, and also the *Frisian* Language, and those Languages on the North of the *Elve*.

4. The *Sclavonick*, which extends itself thro' many large Territories, tho' not without some variation, as *Bohemia*, *Croatia*, *Dalmatia*, *Lithuania*, *Muscovia*, *Poland* and *Vandalia*, this is said to be a Language used by 60 several Nations.

The Languages of lesser Extent are.

1. The *Albanese* or old *Epirotick*, now in use in the mountainous Parts of *Epirus*.

2. The *European*, *Tartar* or *Scythian*, from which some suppose the *Irish* took its Original.

3. As for the *Turkish* Tongue, that originally is no other but the *Asiatick*, *Tartarian* Tongue, mixed with *Armenian*, *Persian*, much *Arabick*, and some *Greek*.

4. The *Hungarian*, used in the greatest part of that Kingdom.

4. The *Finnick*, used in *Finland* and *Lapland*.

6. The *Cantabrian*, in use with the *Biscainers*, who live near the Ocean on the *Pyrenean* Hills, which border both on *Spain* and *France*.

8. The old *Gaulish* or *British*, still preserved in *Wales*, *Cornwall* and *Britain* in *France*.

To these Mr. *Brerewood* adds 4 more.

1. The *Arabick* that is now used in the steep Mountains of *Granada*, which however is no Mother Tongue, being a Dialect of the *Hebrew*.

2. The *Cauchian*, used in East *Friezland*.

3. The *Illyrian*, in the Island *Veggia*.

Absolute MOTION [with *Philosophers*] is the changing of the absolute Place of any Body that moves; so that the swiftness of its motion will be measured by the quantity of the absolute Space, which the moving Body has run through.

Simple MOTION, one that is produced from some one Power.

Relative MOTION [with *Philosophers*] is a change of the relative Place of a Body that moves, the swiftness of which is estimated or measured by the Quantity of relative Space, which the Thing moving runs over.

The MOTION of the Light, is that whereby the Light and the Heat diffuse themselves into all the Parts.

The MOTION of Matter, is eightfold of Expansion, Contraction, Aggregation, Sympathy, Continuity, Impulsion, Libration and Liberty.

The MOTION of Expansion, is that whereby the Matter being rarified with Heat, dilates it self of its own accord, seeking larger room.

The MOTION of Contraction, is that whereby the Matter is contracted, betaking itself into a narrower Space by Condensation.

The MOTION of Aggregation, is when a Body is carried to its Connaturals.

The MOTION of Sympathy, is that whereby a like Body is drawn to its like.

The MOTION of Antipathy, is that where an unlike Body is driven away by its contrary.

The MOTION of Libration, is that wherein the Parts wave themselves to and fro, that they may be rightly placed in the whole.

The MOTION of Liberty, is that whereby a Body, a Part thereof being violently moved out of its Place and yet not plucked away, returns thither again.

MOTION of a Bomb or Cannon Ball, is the Progress it makes in the Air after it is delivered, and is of three sorts; as

Violent MOTION of a Ball, is the first Expulsion of it, when the Powder has worked its Effect upon the Ball; or so far as the Ball or Bomb may be supposed to go in a right Line.

Mixt MOTION of a Ball, is when the Weight of the Bomb or Ball begins to overcome the Force that was given by the Powder.

Natural MOTION of a Ball, is when the Bomb or Ball is falling.

Natural MOTION, is such a motion as has its principle or moving Force within the moving Body, as that of a Stone falling towards the Earth.

Violent MOTION, is a motion, the principle of which is without, and against which the moving Body makes a resistance, as the motion of a Stone thrown upwards.

Pretty MOTION [with *Horsemen*] a Term used to signify the freedom of the motion of the Fore-Legs, when a Horse bends them much upon the manage; also when a Horse trots right out, and keeps his Body strait, and his Head high, and bends his Fore-Legs handsomely.

MOTION equally accelerated [in *Mechanicks*] is such whose velocity increases equally in equal times.

MOTION equally retarded, is such, the velocity of which equally increases in equal times, till the Body comes to rest.

MOTION of the Apogee [in *Astronomy*] is an Arch of the Zodiack of the *primum mobile*.

The Laws of MOTION [according to Sir *Is. Newton*] are,

1. That every Body will continue its State, either of Rest or Motion, uniformly forward in a right Line, unless it be made to change that State by some force impressed upon it.

They are represented as Women, because Disciplines and Virtues have feminine Names assigned to them. They are painted young, handsome and modest, agreeably dress'd and crown'd with Flowers.
